Subject: Profiling Internet Users

In this project, I filtered all the data from the original files by just keeping 'Real First Packet' and 'doctets/duration' and on preprocessing this data I obtained the data from Monday 11 2013 to Monday 22 2013. All this data is for 8:00:00 to 17:00:00 also excluding the weekends. For calculating the spearman's coefficient I have separated all the files using the week parameter and also I have included the week parameter in my processed files present in processd\_materials.
